Report of the statutory auditor

Report of the statutory auditor to the General Meeting of Liechtensteinische Landesbank Aktiengesellschaft Vaduz

Report on the audit of the consolidated financial statements

Opinion

As Group auditor, we have audited the consolidated financial statements (income statement, the statement of comprehensive income, balance sheet, statement of changes in equity, statement of cash flows and notes to the financial statements: pages 112 to 188) and the Group annual report (pages 110 to 111) of Liechtensteinische Landesbank Group (LLB Group) for the year ending as at 31 December 2016.

In our opinion, the accompanying consolidated financial statements give a true and fair view of the consolidated financial position in accordance with the International Financial Reporting Standards (IFRS) and comply with Liechtenstein law.

Basis for opinion

We conducted our audit in accordance with the standards promulgated by the profession in Liechtenstein and the International Standards on Auditing (ISAs), which require an audit to be planned and conducted so as to obtain reasonable assurance whether the consolidated financial statements and the Group annual report are free from material misstatement. We audited the items and disclosures in the consolidated financial statements by means of analyses and surveys on a sample basis.

Further, we assessed the application of the relevant accounting standards, significant decisions concerning the valuations and the presentation of the consolidated financial statements as a whole. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Our audit approach

Overview

Overall Group materiality:
CHF 5.7 million

We concluded full scope audit work at
four reporting units in two countries.

Our audit scope addressed 97 % of profit
before tax and 99 % of the balance sheet
total.

As key audit matters, the following areas of focus have been identified:

- Valuation of customer loans
- Impairment testing of goodwill
- Completeness and adequacy of the provisions for legal and litigation risks

Audit scope

We designed our audit by determining materiality and assessing the risks of material misstatement in the consolidated financial statements. In particular, we considered where subjective judgements were made. For example, in respect of significant accounting estimates that involved making assumptions and considering future events that are inherently uncertain. As in all of our audits, we also addressed the risk of management override of internal controls, including among other matters consideration of whether there was evidence of bias that represented a risk of material misstatement due to fraud.

We tailored the scope of our audit in order to perform sufficient work to enable us to provide an opinion on the consolidated financial statements as a whole, taking into account the structure of the Group, the accounting processes and controls, and the industry in which the Group operates.

Materiality

The scope of our audit was influenced by our application of materiality. Our audit opinion aims to provide reasonable assurance that the consolidated financial statements are free from material misstatement. Misstatements may arise due to fraud or error. They are considered material if, individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the consolidated financial statements.

Based on our professional judgement, we determined certain quantitative thresholds for materiality, including the overall materiality for the consolidated financial statements as a whole as set out in the table below. These, together with qualitative considerations, helped us to determine the scope of our audit and the nature, timing and extent of our audit procedures and to evaluate the effect of misstatements, both individually and in aggregate on the consolidated financial statements as a whole.

Overall Group materiality	CHF 5.7 million
How we determined it	5 % of profit before tax
Rationale for the materiality benchmark applied	We chose profit before tax as the benchmark because, in our view, it is the benchmark against which the performance of LLB Group is most commonly measured, and it is a generally accepted benchmark.

We agreed with the Board of Directors that we would report to them misstatements above CHF 0.3 million identified during our audit as well as any misstatements below that amount which, in our view, warranted reporting for qualitative reasons.

Reporting on key audit matters

Key audit matters are those matters that, in our professional judgement, were of most significance in our audit of the consolidated financial statements of the current period. These matters were addressed in the context of our audit of the consolidated financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Valuation of loans

Key audit matter

LLB Group grants loans to private individuals, corporates and public entities, primarily located in Liechtenstein and Switzerland.

Loans amount to CHF 11.5 billion (previous year: CHF 11.0 billion) and thus represent the largest asset item of LLB Group. Mortgage-based loans form the majority of the loan portfolio (86.5 % of total loans). In addition, LLB Group grants corporate loans and Lombard loans.

Any impairments are recognised by means of individual value adjustments. To this end, judgement has to be applied to calculate the amount of the individual value adjustment. We focused on the two following audit matters:

- The method used by LLB Group to identify any loans that may need adjusting, including loans that show indications of impairment according to the definition of LLB Group.
- The appropriate and consistent application of the policies and instructions issued by Group management relating to the calculation of the amount of the individual value adjustment.

The accounting and valuation principles applied to loans, the method used to identify the default risk and to determine the need for impairment as well as the evaluation of the coverage are taken from the management report.

Please refer to page 121 (accounting principles), page 134 (comments on the consolidated balance sheet) and page 174 (risk management in relation to credit risks).

How our audit addressed the key audit matter

We tested the adequacy and effectiveness of the following key controls relating to the valuation of customer loans:

- Credit processing and authorisation: Sample testing of the requirements and processes set out in the Group's internal policies and working instructions in relation to credit processing. We also tested that authorisation is performed at the proper level in accordance with the system of authorities.
- Credit monitoring (periodic re-approval): Sample testing of identified bad debts and identifying the potential need for impairment.

Where significant judgement is required, we also put forward our own critical opinion as part of the substantive tests of detail on the authority to grant loans. Our tests of detail covered the following:

- Sample-based testing of new business and risk positions (including positions with individual value adjustments or indications of impairment) to evaluate whether additional value adjustments are needed.
- Sample-based testing of the method used to calculate value adjustments in terms of its appropriateness and compliance with the policies and working methods issued by the Group.

The combination of the audit of key controls and the tests of detail gives us sufficient assurance to assess the valuation of customer loans as adequate.

The assumptions used by LLB Group are in line with our expectations.

Impairment testing of goodwill

Key audit matter

The goodwill at the level of LLB Group in the Retail & Corporate Banking segment as at 31 December 2016 amounts to CHF 55.6 million (previous year: CHF 55.6 million) and originates from the acquisition of a subsidiary bank.

LLB Group performed impairment tests on the goodwill twice during the year. For the test, the value in use must be higher than the carrying amount. LLB Group uses a discounted cash flow (DCF) valuation method. The DCF method calculates the value in use based on the expected future cash flows. The method uses the following key assumptions and judgements:

- Assumptions regarding expected cash flows.
- Assumptions regarding the discount rate and the long-term growth rate.

Please refer to page 124 (accounting principles) and page 141 (comments on the consolidated balance sheet).

How our audit addressed the key audit matter

We based our audit on the analyses and calculations performed by Group management. With the involvement of a valuation expert, we performed the following audit procedures:

- Plausibility check of the analyses performed by LLB Group relating to the indications of a need for impairment.
- Assessment of the appropriateness of the DCF method and its implementation.
- Plausibility check of the medium-term planning of the subsidiary bank and an assessment of the expected cash flows by means of a target vs. actual comparison (backtesting).
- Plausibility check of the assumed growth rate and discount rate based on external market information.
- Tests of the sensitivity analysis of the applied parameters and assumptions.

The assumptions used by LLB Group are in line with our expectations.

Completeness and adequacy of the provisions for legal and litigation risks

Key audit matter

In the course of normal business, LLB Group is involved in various legal proceedings. The amount of the provisions for legal and litigation risks as of 31 December 2016 is CHF 47.0 million (previous year: CHF 24.0 million).

We identified the completeness and the adequacy of the provisions for legal and litigation risks as a key audit matter, as significant judgement exists in the assessment of the probability and the amount of the provisions for any financial obligations.

This includes processes to identify, evaluate and monitor client complaints as well as potential and actual legal proceedings. LLB Group creates provisions for actual and impending proceedings if, in the opinion of the specialists responsible, a cash outflow or a loss by the Group company is probable and the amount can be reliably estimated.

Please refer to page 125 (accounting principles), page 146 (comments on the consolidated balance sheet) and page 182 (risk management in relation to operational and legal risks).

How our audit addressed the key audit matter

We based our audit on the analyses performed by Group management. Further, we have referred to external lawyers' letters. We compared the analyses with our own estimates and our understanding of the legal and litigation risks.

We performed the following audit procedures:

- Inquiries of the Head of Group Legal and specific Group management members.
- Review and inspection of the list of client complaints, correspondence with the regulatory authority as well as the minutes of the meetings of the Board of Directors and the Group management for indications of potential lawsuits.
- Review of the central inventory of current legal proceedings and sample testing of lawsuits with regard to the potential need for provisions.
- Obtaining external lawyers' letters and expert opinions on selected ongoing lawsuits with regard to the probability and amount of the provisions, and comparing this with the provisions created by LLB Group as per the consolidated financial statements.

The assumptions used by LLB Group are in line with our expectations.

Other information in the annual report

The Board of Directors is responsible for the other information in the annual report. The other information comprises all information included in the annual report, but does not include the consolidated financial statements, the stand-alone financial statements and our auditor's reports thereon.

Our opinion on the consolidated financial statements does not cover the other information in the annual report and we do not express any form of assurance conclusion thereon.

In connection with our audit of the consolidated financial statements, our responsibility is to read the other information in the annual report and, in doing so, consider whether the other information is materially inconsistent with the consolidated financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors for the consolidated financial statements

The Board of Directors is responsible for the preparation of the consolidated financial statements that give a true and fair view in accordance with IFRS and the provisions of Liechtenstein law, and for such internal controls as the Board of Directors determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, the Board of Directors is responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the consolidated financial statements

Our objectives are to obtain reasonable assurance that the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Liechtenstein law and ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As part of an audit in accordance with Liechtenstein law and ISAs, we exercise professional judgement and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal controls.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.
- Conclude on the appropriateness of the Board of Directors' use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the Group audit. We remain solely responsible for our audit opinion.

We communicate with the Board of Directors or the Group Audit Committee regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Board of Directors or the Group Audit Committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence and, where applicable, related safeguards.

From the matters communicated with the Board of Directors or the Group Audit Committee, we determine those matters that were of

most significance in the audit of the consolidated financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on other legal and regulatory requirements

The consolidated management report is in accordance with the consolidated financial statements.

We recommend that the consolidated financial statements submitted to you be approved.

PricewaterhouseCoopers AG

Claudio Tettamanti
Auditor in charge

St. Gallen, 27 February 2017

Consolidated management report

LLB Group financial statement

The consolidated financial statement is prepared in accordance with the International Financial Reporting Standards (IFRS).

In the 2016 business year, the LLB Group earned a net profit of CHF 103.9 million (2015 business year: CHF 86.3 million). The net profit for 2016 therefore improved in comparison with the previous year by 20.4 percent or CHF 17.6 million.

In comparison with 2015, operating income rose by 18.7 percent and operating expenses by 16.8 percent. The net profit attributable to the shareholders of LLB amounted to CHF 98.2 million (2015: CHF 82.7 million). Earnings per share stood at CHF 3.40 (2015: CHF 2.87).

Income statement

Operating income rose by 18.7 percent to CHF 371.7 million (2015: CHF 313.2 million).

Interest income before credit loss expense was up in the 2016 business year by 4.2 percent to CHF 138.1 million (2015: CHF 132.5 million). Interest business with clients increased by 3.7 percent in comparison with the previous year. The negative effects on interest income caused by the extension of fixed-interest loans at lower conditions were compensated for by lower refinancing costs and targeted growth in mortgage lending business. In the current interest rate environment, the LLB Group in some cases pays negative interest on interest rate hedging instruments and money invested in the interbank market. In spite of this, thanks to higher interest rates on USD holdings, LLB was able to slightly improve interest business with banks by 3.2 percent or CHF 0.3 million. In the 2016 business year, a net charge of CHF 1.0 million (2015: CHF 6.0 million) was made to the income statement for credit loss expense. Net fee and commission income decreased slightly by 2.6 percent to CHF 145.7 million (2015: CHF 149.6 million). The persisting uncertainty on the financial markets led to restraint on the part of clients in making stock market transactions, which resulted in a reduction of net brokerage of 10.6 percent compared with the previous year. The recovery of the financial markets in the second half year generated higher performance-linked earnings.

Net trading income totalled CHF 55.9 million (2015: CHF 33.1 million). Client trading in foreign exchange, foreign notes and precious metals compared with the previous year fell by 2.7 percent to CHF 41.8 million. In the previous year, the trading volume in foreign exchange was unusually high in the first half year due to the SNB's lifting of support for the minimum euro exchange rate in January 2015. On account of the higher long-term market interest rates in the second six months of 2016, from the perspective of the reporting date, valuation gains on interest rate hedging instruments for the 2016 business year amounted to CHF 14.1 million (2015: minus CHF 10.1 million).

Net income from financial investments at fair value through profit and loss totalled CHF 21.8 million (2015: minus CHF 0.7 million). Income from interest and dividends decreased to CHF 14.9 million, a fall

of 17.4 percent compared with the previous year on account of persistently low interest rates and a lack of investment possibilities.

Other income amounted to CHF 11.1 million in comparison with CHF 4.8 million in the previous year. The change relative to the comparison period was attributable to the proceeds from the sale of property amounting to CHF 7.5 million. Operating expenses stood at CHF 258.2 million and were thus 16.8 percent or CHF 37.1 million higher than the previous year's figure of CHF 221.1 million.

Operating income (in CHF millions)

At CHF 140.8 million, personnel expenses were up by 13.8 percent or CHF 17.1 million compared with the previous year (2015: CHF 123.8 million). The increase is attributable to the strategic expansion of personnel to 858 full-time equivalent positions (31.12.2015: 816). In addition, higher accruals were made for variable salary compensation on account of the share-price-based compensation model. Personnel expenses also include one-time expense reductions from the valuation of staff pension obligations amounting to CHF 10.2 million. In the previous year a one-time reduction of pension obligations of CHF 11.3 million had also been booked.

General and administrative expenses increased by 41.2 percent to CHF 89.9 million (2015: CHF 63.7 million). This position includes the allocation of provisions for various legal and litigation risks amounting to CHF 24.4 million (2015: write back of CHF 1.0 million). Without this effect, general and administrative expenses would have been CHF 1.8 million or 2.8 percent higher than in the previous year.

Depreciation and amortisation fell by CHF 6.1 million to CHF 27.5 million (2015: CHF 33.7 million). This was largely attributable to the one-time impairment of assets in the previous year.

The Cost-Income-Ratio for the 2016 business year stood at 62.8 percent (2015: 69.5 %). Without market effects, i.e. without income from interest rate swaps and price gains from financial investments, the Cost-Income-Ratio stood at 66.5 percent (2015: 63.7 %).

Balance sheet

The consolidated balance sheet total remained virtually unchanged in comparison with 31 December 2015 and stood at CHF 20.0 billion (31.12.2015: CHF 19.7 billion). Loans to clients were 5.0 percent higher compared with 31 December 2015. Mortgage loans expanded by 4.2 percent to CHF 10.0 billion.

Equity attributable to the shareholders of LLB amounted to CHF 1.7 billion at 31 December 2016. The Tier 1 ratio totalled 21.0 percent (31.12.2015: 20.6 %). The return on equity attributable to the shareholders of LLB stood at 5.9 percent (2015: 5.0 %).

Assets under management

Assets under management at 31 December 2016 stood at CHF 46.4 billion (31.12.2015: CHF 45.6 billion). The LLB Group attained a performance-related increase in assets under management of 1.9 percent. Assets in own-managed funds climbed by 3.5 percent to CHF 4.6 billion (31.12.2015: CHF 4.4 billion) and assets with discretionary mandates by 2.3 percent to CHF 6.5 billion (31.12.2015: CHF 6.4 billion). Other assets under management amounted at 31 December 2016 to CHF 35.3 billion (31.12.2015: CHF 34.8 billion).

The LLB Group registered net new money outflows of CHF 65 million (2015: minus CHF 206 million). Outflows have therefore slowed down. In contrast, however, the Retail & Corporate Banking segment generated very robust inflows of CHF 334 million from private and corporate clients in the domestic Swiss and Liechtenstein markets. And the Private Banking segment also posted gratifying inflows totalling CHF 173 million, especially from the strategic growth markets. On account of individual larger outflows with public institutions and in cross-border business, net new money inflows in the Institutional Clients segment amounted to minus CHF 568 million.

Assets under management (in CHF millions)

Outlook

The LLB Group is confronted with economic and industry-specific challenges. The business environment is marked by the strength of the Swiss franc, negative interest rates and volatile financial markets. This is exacerbated by political uncertainties, increasing regulation and the accelerated pace of change with information technology, which will continue to challenge the banking industry. Thanks to its focused business model and its clear StepUp2020 strategy, the LLB Group views the future with confidence. In spite of the challenging business conditions, it expects to achieve further operative progress and a solid business result in the 2017 business year.

Accounting principles

1 Basic information

The LLB Group offers a broad spectrum of financial services. Of particular importance are asset management and investment counselling for private and institutional clients, as well as retail and corporate client businesses.

The Liechtensteinische Landesbank Aktiengesellschaft, founded in and with its registered office located in Vaduz, Principality of Liechtenstein, is the parent company of the LLB Group. It is listed on the SIX Swiss Exchange.

The Board of Directors reviewed this consolidated annual statement at its meeting on 27 February 2016 and approved it for publication.

2 Summary of significant accounting policies

The significant accounting and valuation methods employed in the preparation of this consolidated financial statement are described in the following. The described methods have been consistently employed for the reporting periods shown, provided no statement to the contrary is specified.

2.1 Basis for financial accounting

The consolidated financial statement has been prepared in accordance with the International Financial Reporting Standards (IFRS).

Further basis for the preparation of the financial statement

The Group financial statement was prepared on the basis of historical acquisition or production cost with the exception of the revaluation of certain financial assets and liabilities.

Numerous new IFRS standards, as well as amendments and interpretations of existing IFRS standards, were published and became effective for financial years starting on 1 January 2016 or later. The following new or revised IFRS standards or interpretations are of importance for the LLB Group:

- IAS 12 "Income Taxes" – The amendments clarify how deferred tax claims from unrealised losses on assets reported at fair value are to be recognised. The standard is to be applied retroactively and comes into effect on 1 January 2017. An earlier implementation is possible, but the LLB Group has not done so. The implementation of the changes has no major influence on the LLB Group's financial statement.
- IAS 40 "Investment Property" – The amendments stipulate that in future the transfer of real estate into or out of the inventory of real estate held as financial investments is to be assessed on a principle-based basis. In future, transfers will only be made if there is a change of use. In this case, it is to be assessed whether a property meets the definition of real estate held as a financial investment. In addition the change of use must be evidenced, i.e. there must be objective evidence of, and not just an intention for, a change of use.

In comparison with the previous ruling, the list of examples was changed from an exhaustive to a non-exhaustive list. In relation to operating leases, in future the commencement of the leasing relationship will be relevant as the time point of the transfer, and no longer the start of the lease term. The amendments are effective for periods on or after 1 January 2018. Retrospective application is also possible if this is possible without the use of hindsight. An earlier implementation is possible, but the LLB Group will not do so. The implementation of the changes has no major influence on the LLB Group's financial statement.

- IFRS 2 "Share-based Payment" – The amendments concern rulings in connection with cash-settled share-based payments. An exception will continue to apply to share-based payments involving a so-called net settlement feature. In this case, the tax to be paid by the employee will be paid directly to the competent tax authority by the company. Accordingly, the employee retains only the share-based payment amounting to the balance from the original entitlement and the tax liability. Only the net settlement feature could be of future relevance for LLB. At the moment this situation does not exist. The new rulings come into effect on 1 January 2018. Retrospective application is also possible if this is possible without the use of hindsight. An earlier implementation is possible, but the LLB Group will not do so. The implementation of the changes has no major influence on the LLB Group's financial statement.
- IFRS 9 "Financial Instruments" – IFRS 9 is divided into three phases: classification and measurement, impairment and hedge accounting. The classification and measurement of financial instruments are made on the basis of the business model of the bank for the management of financial instruments and the contractual cash flow characteristics of the financial assets. The financial instruments are classified in the "Hold" business model and measured at amortised cost, if the purpose of the financial instrument is to generate interest earnings and payment of the principal upon maturity. If the financial instruments are held for liquidity management reasons, i.e. for the purpose of holding and sale, then the instruments are to be recognised at fair value through other comprehensive income. Gains and losses from this business model are booked in the statement of other comprehensive income and equity. Financial instruments which do not fulfil the SPPI criteria or which are used for the fair value option are to be classified as fair value through profit or loss. The new regulations will have no major impact because the LLB Group already reports the financial assets under IAS 39 in such a way that these correspond to the requirements of IFRS 9. Currently, there is a discussion about whether financial instruments are to be recognised at amortised cost, which permits early repayment and where the debtor is entitled to utilise the option of early repayment. The models under discussion concern financial instruments, or mortgage loans, which enable a symmetrical early repayment or an early repayment at fair value. By utilising the option, there is a possibility that the debtor could be compensated by the creditor. The board has decided to formulate

a closely defined exception which permits instruments with symmetrical early repayment penalties to be reported in the balance sheet at amortised cost or at fair value with recognition of the changes in other comprehensive income, even though they do not fulfil the criteria as “solely payments of principal and interest on the outstanding capital amount”. The proposed implementation date for this exception is 1 January 2018. This issue has no relevance for the LLB Group because basically agreements are concluded with clients which envisage unilateral compensation for the bank’s lost interest in the event of early repayment.

On the basis of IFRS 9, impairments are to be recognised at an early stage (expected loss model). The amount of the impairment is determined on the basis of the classification of the financial instrument in one of the following three stages. In stage 1 there is no significant deterioration in credit quality and impairments amounting to the cash value of a 12-month expected credit loss are to be recognised. If there is no objective indication of an impairment, but a significant increase in credit risk has occurred, the impairment is to be recognised in the expected life-time credit loss (stage 2). In stage 3, there must be an objective indication of an impairment and a single allowance (life-time expected loss) is to be made for this financial instrument. These three stages are to be reviewed on every balance sheet key date. The LLB Group is currently installing a software application to enable the correct replication of the requirement to measure the expected losses. Various models are used in the calculation, which take into consideration the possible future probability of default by the counterparty, the expected loss, and also the loss given default. In addition, macro-economic forecasts are included in the calculation. The evaluation of which values should be applied to input parameters in the models, for example, what a significant increase in risk means and which level a financial instrument should be assigned to, therefore necessitate a high degree of judgement. These estimates determine the credit quality of the financial assets, which are exposed to a credit risk, and which in turn have an impact on the magnitude of the expected losses. Generally, it is expected the expected loss model under IFRS 9 will lead to higher value adjustments.

In addition, IFRS 9 regulates hedge accounting, whereby it seeks to standardise risk management and accounting. Hedges are to be better reflected in the financial accounts.

At present the LLB Group employs macro hedge accounting at portfolio level, which is not yet regulated under IFRS 9. Until the completion of the IASB project in macro-hedge accounting, LLB can continue to follow unchanged its previous approach under IFRS 9. Consequently, there are no major effects on the LLB Group. The new standard comes into effect on 1 January 2018. An earlier implementation is possible, but the LLB Group will not do so. It will be applied retrospectively except for other provisions in individual paragraphs. In the case of paragraph 7.2.15, which deals with the disclosure of details concerning financial instruments in paragraphs 42L–42O under IFRS 7, the LLB Group will provisionally choose the simplified

application form, i.e. it will not show the comparison periods for the provisions specified there.

- IFRS 15 “Revenue from Contracts with Customers” – In May 2014, the International Accounting Standards Board (IASB), together with the Financial Accounting Standards Board (FASB), issued new regulations for the recognition of revenue, which completely replace the existing USGAAP and IFRS rulings for the recognition of revenue. The recognition requires that revenue be shown as goods or services transferred to the customer in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. IFRS 15 contains a 5-step model to calculate the revenue, whereby the type of transaction or the industry, in which the company operates is irrelevant. Furthermore the standard includes guidelines concerning the costs for the attainment and performance of a contract, as well as when such costs are to be capitalised. The standard specifies additional disclosures. In general, for LLB, the introduction of IFRS 15 will have only a slight influence on the recognition, balancing, presentation and disclosure of such items. The primary reason for this is that IFRS 15 is aimed mainly at industrial sectors and less at the financial services industry. Revenues from financial instruments, which represent the main business of LLB, do not fall under the provisions of IFRS 15 but rather are shown according to IFRS 9. Currently, revenues from fees and commissions are reported in one position (one line). In future, if they are material, further positions (lines) will be shown in a table to enable a more detailed presentation. LLB is therefore following the amendments to IAS 1 within the scope of the Disclosure Initiative, which are to be applied from 1 January 2016. According to one’s discretion, lines showing aggregated revenues may be presented, provided they do not bring the reader additional benefits if listed individually. The new standard comes into effect from 1 January 2018. An earlier implementation is possible, but the LLB Group will not do so. It will be applied retrospectively and on the basis of simplified transition provisions.
- IFRS 16 “Leasing” – The new standard regulates the recognition and disclosure of leasing contracts. Leasing contracts are understood to be contracts that convey the right to use an asset for a period of time in exchange for a consideration. This can be, for example, the leasing of premises or equipment. The IFRS 16 contains no material threshold values for when a leasing contract is to be recognised as an asset, rather all substantial leasing contracts are basically to be entered in the accounts. However options exist for short-term leasing terms (shorter than 12 months) and for low-value assets. The entering of leasing contracts in the financial accounts leads to a balance sheet extension, which basically has a negative impact on the regulatory required equity and also on the corresponding regulatory key figures, such as the Tier 1 ratio. The standard comes into effect on 1 January 2019. An earlier implementation is possible, but the LLB Group will not do so. It will be applied retrospectively, either completely or in a modified form. The effects of these changes on the LLB Group’s financial reporting are currently being analysed.

- Disclosure Initiative of the IASB – The IASB has started a project to explore how disclosures in IFRS financial reporting can be improved. This encompasses several smaller adjustments to the existing standard in addition to the comprehensive revision of the conceptual framework, as well as a fundamental revision of IAS 1 (“Presentation of Financial Statements”), IAS 7 (“Statement of Cash Flows”) and IAS 8 (“Accounting Policies, Changes in Accounting Estimates and Errors”) ». The following explanations refer to the small adjustments to be made to the existing standards. The aim of the changes to IAS 1 is to provide companies with more latitude in how data is presented, e.g. by the aggregation or disaggregation of information. Basically, the issue of materiality also plays a role. Materiality has to be viewed in relation to the entirety of the presented information. This can mean that specific details in standards are not presented if these are classed as being immaterial. The changes came into effect from 1 January 2016. The amendments to IAS 7 refer to changes in financial obligations arising from financing activity, including a separation into cash and non-cash changes. These come into effect from 1 January 2017. An earlier implementation is possible, but the LLB Group will not make use of this possibility. The standard will be applied prospectively.

Within the scope of its annual improvements, the IASB published further improvements (Annual Improvements to IFRS 2012 – 2014 Cycle), which came into effect on 1 January 2016. The implementation of the amendments has no major influence on the financial statement of the LLB Group.

Use of estimates in the preparation of financial statements

In preparing the financial statements in conformity with IFRS, the management is required to make estimates and assumptions that affect reported income, expenses, assets, liabilities and disclosure of contingent assets and liabilities. Use of information available to LLB on the balance sheet date and application of judgement are inherent in the formation of estimates. Actual results in the future could differ from such estimates, and the differences could be substantial to the financial statements.

The IFRS contains guidelines which require the LLB Group to make estimates and assumptions when preparing the consolidated financial statement. Allowances for credit loss risks, goodwill, intangible assets, provisions for legal and litigation risks, fair value conditions for financial instruments and value adjustments for pension plans are all areas which leave large scope for estimate judgments. Assumptions and estimates made in these areas could be substantial to the financial statement. Explanations regarding this point are shown under notes 13, 19, 26, 34 and 40.

2.2 Consolidation policies

The consolidated financial statement adopts a business perspective and follows a financial format. The consolidation period corresponds to the calendar year. The financial year is identical to the calendar year for all consolidated companies. Solely LLB Invest AGmVK and LLB Qualified Investors AGmVK have a different financial year; however, these companies are negligible for the preparation of the consolidated financial statement. The Swiss franc (CHF), the currency of the country in which LLB AG has its registered office, serves as the reporting currency of the LLB Group.

Subsidiaries

The consolidated financial statement incorporates the financial accounts of Liechtensteinische Landesbank AG and its subsidiaries. LLB Group companies, in which Liechtensteinische Landesbank AG holds, directly or indirectly, the majority of the voting rights or otherwise exercises control, are fully consolidated. Subsidiaries acquired are consolidated from the date control is transferred to Liechtensteinische Landesbank AG, and are no longer consolidated from the date this control ends.

The consolidation is carried out according to the purchase method. The effects of intra-group transactions and balances are eliminated in preparing the financial statements. Transactions with minorities are booked to equity.

Equity attributable to minority interests is presented in the consolidated balance sheet in equity, separately from equity attributable to LLB shareholders. Net profit attributable to minority interests is shown separately in the income statement.

Participations in joint ventures

Joint ventures, i.e. companies in which LLB has a 50 percent participation, are recognised according to the equity method.

Changes to the scope of consolidation

There were no changes to the scope of consolidation in the 2016 business year.

2.3 General principles

Recording of business

Sales and purchases from trading assets, derivative financial instruments and financial investments are booked on the transaction date. Loans, including those to clients, are recorded in that period of time in which the funds flow to the borrower.

Income accrual

Income from services is recorded at the time the service was rendered. Asset management fees, safe custody fees and similar types of income are recorded on a pro rata basis over the period the specific service is provided. Interest income is recorded using the effective interest method. Dividends are recorded at the time point a legal claim comes into existence.

Inland versus abroad

"Inland" encompasses the Principality of Liechtenstein and Switzerland.

2.4 Foreign currency translation

Functional currency and reporting currency

The items contained in the financial accounts of each Group company are valued in the currency which is used in the primary business environment in which the company operates (functional currency).

The reporting currency of the LLB Group is the Swiss franc.

Group companies

Group companies which report their financial accounts in a functional currency other than the Group's reporting currency are translated as follows: all assets and liabilities are converted at the relevant exchange rate valid on the balance sheet date. All individual items in the income statement and statement of cash flows are converted at the average exchange rate for the accounting period. All resulting exchange differences are booked individually to equity or other comprehensive income.

Transactions and balances

Foreign currency transactions are translated on the day of the transaction at spot rates into the functional currency. Monetary assets and liabilities in foreign currency are translated on the balance sheet date at the exchange rate prevailing on the reporting date into the functional currency. The price gains or losses resulting from the valuation are booked to the income statement. Non-monetary foreign currency positions measured at fair value are translated at the exchange rate prevailing on the date of the calculation of the fair value. The following exchange rates were employed for foreign currency conversion:

Reporting date rate	31.12.2016	31.12.2015
1 USD	1.0167	0.9989
1 EUR	1.0726	1.0871
1 GBP	1.2588	1.4783

Average rate	2016	2015
1 USD	0.9889	0.9672
1 EUR	1.0895	1.0751
1 GBP	1.3397	1.4772

2.5 Cash and balances with central banks

Cash and balances with central banks consist of cash in hand, postal cheque balances, giro and sight deposits at the Swiss National Bank and foreign central banks, as well as clearing credit balances at recognised central savings and clearing banks, claims from money market instruments with an original maturity period of less than three months as well as loans due from banks (due daily).

2.6 Balances due from banks and from customers

Balances due from banks and from customers are initially recorded at actual cost, corresponding to the fair value of the specific loan at the time it was granted. Subsequent valuation reflects the amortised cost under application of the effective interest rate method.

Interest on balances due from banks and from customers is recognised on an accrual basis and is reported according to the effective interest method, included under the item interest income.

Negative interest on assets and liabilities is accrued in a period-compliant manner and reported in the income statement as interest paid or interest received.

Basically, the LLB Group extends loans only on a collateralised basis, and only to counter parties having very high credit worthiness.

Loans are regarded as being impaired if it is likely that the entire amount owed according to the loan agreement is not recoverable. Loan impairments are caused by country- or counterparty-specific criteria. Indications for the impairment of financial assets are:

- the financial difficulty of the borrower;
- a breach of contract, such as a default or delinquency in interest or principal payments;
- the increased probability that the borrower will enter bankruptcy or financial reorganisation;
- national or local economic conditions that correlate with defaults on the assets of the Group.

The amount of the impairment is measured as the difference between the carrying value of the claim and the estimated future cash flow, discounted by the loan's original effective interest rate. Allowances for credit risks is reported as a reduction of the carrying value of a claim on the balance sheet, whereas for an off-balance sheet item, such as a commitment, a provision for credit loss is reported under provisions. Impairments are recognised in the income statement.

2.7 Trading portfolio assets

Trading portfolio assets comprise equities, bonds and structured financial products. Financial assets held for trading purposes are recorded at fair value. Short positions in securities are reported as trading portfolio liabilities at fair value. Realised and unrealised gains and losses as well as interest and dividends are recorded in net trading income.

Fair value is based on current market prices in the case of an active market. In the absence of an active market, fair value is calculated on the basis of valuation models (see 2.9 "Financial investments").

2.8 Derivative financial instruments and hedge accounting

Derivative financial instruments are valued as positive or negative replacement values corresponding to fair value and are reported in the balance sheet. Fair value is calculated on the basis of exchange quotations; in the absence of these, valuation models are employed. Derivative financial instruments are held within the LLB Group for hedging and trading purposes. If the derivative financial instruments held for hedging purposes do not fulfil the strict IFRS hedge accounting criteria, changes in fair value are recognised, as with derivative financial instruments for trading purposes, in net trading income. Within the LLB Group, income effects of hedging transactions according to hedge accounting guidelines arise only with the ineffective component, the effects of the effective component neutralise each other.

Hedge accounting

Within the scope of risk management, derivative financial instruments are employed mainly to manage interest rate and foreign currency risks. If these transactions fulfil the IFRS-specific hedge accounting criteria, and if these were employed as hedging instruments from a risk management perspective, they can be shown according to hedge accounting guidelines. If these transactions do not fulfil the IFRS-specific hedge accounting criteria, they are not presented according to hedge accounting guidelines, even if from an economic point of view they represent hedging transactions and are consistent with the risk management principles of the LLB Group.

The LLB Group employs fair value hedge accounting for interest rate instruments. In this case, the interest rate risks of the underlying transaction (e.g. a fixed-rate mortgage) are hedged by means of hedging instruments (e.g. an interest rate swap). Fair value hedge accounting is applied at the portfolio level, whereby one hedging instrument is used to secure one or more underlying transactions. The effect on income of the fair value change in the hedging instrument is recognised in the income statement in the same position as the corresponding effect on income of the fair value changes in the hedged underlying transactions.

In the case of the hedging of interest rate risks at the portfolio level, the fair value change in the hedged item is recognised in the same balance sheet position as the underlying item. As soon as a financial instrument is classified as a hedging instrument, and the hedging instrument fulfils the IFRS-specific hedge accounting criteria, the relationship between the hedging instrument and the hedged underlying transaction or the portfolio of underlying transactions is formally documented. This documentation contains the risk management goals and strategies for the underlying hedged relationship, as well as methods to assess the effectiveness, i.e. the effectiveness of the hedging relationship. The effectiveness of a hedging transaction is understood to be the extent to which changes in the fair value of the underlying transaction, which are attributable to a hedged risk, can be compensated for by changes in the fair value of the hedging transaction. An assessment is made, both when the hedging relationship is first applied and during its term, of whether it can be regarded as "highly effective". A hedge is regarded as being highly effective if: a) it is assessed as being highly effective both when the hedge is initially recognised and during the entire term of the transaction, and b) the actual results of the hedging transaction lie within a range of 80 to 125 percent. The part outside the range of 80 to 125 percent is classed as being ineffective.

If fair value hedge accounting is employed for reasons other than the derecognition of the hedged transaction, the amount, which is reported in the same balance sheet position as the underlying transaction, is amortised over the residual term of the underlying transaction in the income statement.

2.9 Financial investments

According to IFRS, financial investments can be divided into various categories. The classification depends on the purpose for which the individual financial investments were made. The management of the LLB Group determines the classification upon initial recognition. In the 2016 business year and in the 2015 business year, financial investments were classified in the category "Financial investments at fair value through profit and loss", as well as the category "Available-for-sale financial assets". All value adjustments with the category "Financial investments at fair value through profit and loss" are recognised in the income statement. All value adjustments with the category "Available-for-sale financial assets" are reported in other comprehensive income.

This designation of the financial investments is in line with LLB's investment strategy. The securities are managed on a fair value basis and their performance is evaluated accordingly. The members of the Group Executive Management receive the corresponding information.

Financial assets at fair value through profit and loss

Financial assets are recorded on the balance sheet at fair value. Non-realised gains and losses are reflected in the income statement at fair value under income from financial instruments. The fair value of listed shares is based on current market prices. If an active market is not available for financial assets, or if the assets are not listed, the fair value is determined by way of suitable valuation models. These encompass references to recent transactions between independent business partners, the application of the current market prices of other assets which are essentially similar to the assets being valued, discounted cash flows and external pricing models, which take into account the special circumstances of the issuer. See also note 34.

Interest and dividend income from financial investments is recorded at fair value as income from financial instruments. Interest income is recognised on an accrual basis.

Available-for-sale financial assets

Financial assets which are available for sale are recognised at fair value. Value changes, such as unrealised gains or losses, are reported in other comprehensive income. The fair value of these financial assets is measured on the basis of listed shares. If no active market exists or the assets are not listed on an exchange, the fair value is determined, similar to financial assets at fair value through profit and loss, by means of suitable valuation models. See also note 34.

Interest and dividend earnings are recognised in the income statement. Interest is reported on an accrual basis.

2.10 Property, investment property and other equipment

Property is reported in the balance sheet at acquisition cost less any depreciation necessary for operational reasons. Bank buildings are buildings held by the LLB Group for use in the delivery of services or for administration purposes, whereas investment property is held to earn rentals and / or for capital appreciation. If a property is partially used as investment property, the classification is based on whether or not the two portions can be sold separately. Investment property is periodically valued by external experts. Changes in fair value are recognised in the income statement as other income in the current period. If the portions of the property can be sold separately, each portion is booked separately. If the portions cannot be sold separately, the whole property is classified as a bank building unless the portion used by the bank is minor.

Equipment includes fixtures, furnishings, machinery and IT equipment. These items are entered in the financial accounts and depreciated over the estimated useful life of the asset.

Depreciation is conducted on a straight-line basis over the estimated useful life as follows:

Property	33 years
Investment property	no depreciation
Undeveloped land	no depreciation
Building supplementary costs	10 years
Fixtures, furnishings, machinery	5 years
IT equipment	3 years

Small value purchases are charged directly to general and administrative expense. In general, maintenance and renovation expenditures are booked to general and administrative expense. If the related cost is substantial and results in a significant increase in value, such expenditures are capitalised and depreciated over their useful life. Profits from the sale of fixed assets are reported as other income. Losses result in additional write-downs on fixed assets.

Property and equipment is regularly reviewed for impairment, but always when, on account of occurrences or changed circumstances, an overvaluation of the carrying value appears to be possible. If, as a result of the review, a reduction in value or modified useful life is determined, the residual carrying value is depreciated over the adjusted useful life, or an unplanned write-down is made.

2.11 Non-current assets held for sale

Long-term assets (or a disposal group) are classified as held for sale, if their carrying amount will be recovered primarily through a sale transaction rather than through continuing use. For this to be the case, the asset (or the disposal group) must be available for immediate sale in its present condition subject only to the terms that are usual and customary for sales of such assets (or disposal groups) and such a sale must be highly probable. Long-term assets held for sale and disposal groups are measured at the lower of carrying amount and fair value less costs to sell, unless the items shown in the disposal group are not classified in the valuation rules of IFRS 5 "Non-current assets held for sale and discontinued operations".

2.12 Goodwill and other intangible assets

Goodwill is defined as the difference between the purchase price paid for and the determined fair value at date of acquisition of identified net assets in a company purchased by the LLB Group. Other intangible assets contain separately, identifiable intangible values resulting from acquisitions and certain purchased brands/trademarks and similar items. Goodwill and other intangible assets are recognised on the balance sheet at cost determined on the date of acquisition, and are amortised using the straight-line method over the useful life of ten to fifteen years. On each balance sheet date, goodwill and other intangible assets are reviewed for indications of impairment or changes in future benefits. If such indications exist, an analysis is performed to assess whether the carrying value of goodwill or other intangible assets is fully recoverable. An amortisation is made if the carrying amount exceeds the recoverable amount. For impairment testing purposes, goodwill is distributed into cash generating units. A cash generating unit is the smallest group of assets that independently generates cash flow and whose cash flow is largely independent of the cash flows generated by other assets. Cash flows generated from independent groups of assets are largely determined on the basis of how management steers and manages business activity. The management of the LLB Group manages and steers business activity in divisions so that the divisions and segments are designated as the cash generating units of the Group.

Software development costs are capitalised when they meet certain criteria relating to identifiability, it is possible that economic benefits will flow to the company, and the cost can be measured reliably. Internally developed software meeting these criteria and purchased software are capitalised and subsequently amortised over three to ten years. See also note 19.

2.13 Current and deferred taxes

Current income tax is calculated on the basis of the tax law applicable in the individual country and recorded as expense for the accounting period in which the related income was earned. The relevant amounts are recorded on the balance sheet as provisions for taxes. The tax impact from time differentials due to different valuations arising from the values of assets and liabilities reported according to IFRS shown on the Group balance sheet and their taxable value are recorded on the balance sheet as accrued tax assets or, as the case may be, deferred tax liabilities. Deferred tax assets and deferred tax liabilities attributable to time differentials or accountable loss carry forwards are capitalised if there is a probability that sufficient taxable profits will be available to offset such differentials of loss carry forwards. Accrued / deferred tax assets / liabilities are calculated at the tax rates that are likely to be applicable for the accounting period in which the tax assets are realised or the tax liabilities paid.

Current and deferred taxes are credited or charged directly to equity or other comprehensive income if the related tax pertains to items that have been credited or charged directly to equity or other comprehensive income in the same or some other accounting period.

2.14 Debt issued

Medium-term notes are recognised at fair value, which usually corresponds to the issuance value, and at amortised cost. Debt instruments, which contain an embedded option for conversion of the debt into shares of LLB AG, are separated into a liability and an equity component. The difference between the proceeds of the issue price and the fair value of the instrument on the issue date is booked directly to equity. The fair value of the liability component on the issue date is determined on the basis of the market interest rate for comparable instruments without conversion rights. Thereafter, it is recognised at ongoing cost according to the effective interest method. Differences between the proceeds and the repayment amount are reported in profit and loss over the term of the debt instrument concerned. The LLB Group does not report changes in the value of the equity component in the following reporting periods.

2.15 Employee benefits

Retirement benefit plans

LLB Group has pension plans for its employees in Liechtenstein and abroad, which are defined according to IFRS as defined benefit plans. In addition there are long-term service awards which qualify as other long-term employee benefits.

For benefit-oriented plans, the period costs are determined by opinions obtained from external experts. The benefits provided by these plans are generally based on the number of insured years, the employee's age, covered salary and partly on the amount of capital saved. For benefit-oriented plans with segregated assets, the relevant funded status is recorded on the balance sheet as an asset or liability (in accordance with the Projected Unit Credit Method). An asset position is calculated according to the criteria of IFRIC 14.

For plans without segregated assets, the relevant funded status recorded on the balance sheet corresponds to the cash value of the claims.

The cash value of the claims is calculated using the "Projected Unit Credit Method", whereby the number of insured years accrued up to the valuation date are taken into consideration.

The effects of retroactive improvements to benefits resulting from plan changes and plan curtailments are recognised directly in the income statement.

Variable salary component and share-based remuneration

Regulations exist governing the payment of variable salary components. The valuation procedure with the variable salary component is based on the degree of individual target achievement. Executives receive a portion of their profit-related bonus in the form of LLB bearer shares. However, no exercising conditions are attached to this procedure.

The LLB Group enters a provision as a liability in those cases where a contractual obligation exists or a de facto obligation arises as a result of past business practice. The expense is recognised under personnel expenses. Obligations to be paid in cash are entered under other liabilities. The portion to be compensated with LLB bearer shares is entered in equity. The number of shares for the share-based compensation corresponds to the average share price of the last quarter of the year under report.

2.16 Provisions and contingent liabilities

The business environment in which the LLB Group currently operates exposes it to significant legal and regulatory risks. As a result, LLB is involved in various legal proceedings, whose financial influence on the LLB Group – depending on the stage of the proceeding – is difficult to assess and are subject to many uncertainties. The LLB Group makes provisions for ongoing and threatened proceedings when, in the opinion of management after taking legal advice, it is probable that a liability exists, and the amount of the liability or payment can be reasonably estimated.

For certain proceedings in cases where the facts are not specifically known, the claimant has not quantified the alleged damages, the proceedings are at an early stage, or where sound and substantial information is lacking, the LLB Group is not in a position to estimate reliably the approximate financial implication. In many legal cases, a combination of these facts makes it impossible to estimate the financial effect of contingent liabilities for the LLB Group. If, indeed, such assumptions or estimates were made or disclosed, it could seriously prejudice the position of the LLB Group in such legal cases.

In cases where only a possible liability is involved, but the management does not believe that there is a probability of an outflow of resources, this leads to a contingent liability for the LLB Group, but not to the formation of a provision. The amount of the contingent liabilities results based on best estimate.

2.17 Allowances for credit risks

Allowances for credit risks are made at LLB, provided there are objective criteria indicating that the entire amount owed according to the loan agreement may not be recoverable. At LLB, a credit amount is understood to be a loan, a claim or a fixed commitment such as a documentary credit, a guarantee, or a similar credit product. Objective criteria are serious financial difficulties experienced by the borrower, default or delinquency in interest or capital payments, or the probability that the borrower cannot repay the loan. Allowances for credit risks are reported as a reduction of the carrying value of a claim on the balance sheet. Allowances are reported in the income statement under credit loss (expense) / recovery. For further information, see "Risk management", chapter "3. Credit risk".

2.18 Treasury shares

Shares of Liechtensteinische Landesbank AG held by the LLB Group are valued at cost of acquisition and reported as a reduction in equity. The difference between the sale proceeds and the corresponding cost of acquisition of treasury shares is recorded under capital reserves.

2.19 Securities lending and borrowing transactions

Securities lending and borrowing transactions are generally entered into on a collateralised basis, with securities mainly being advanced or received as collateral.

Treasury shares lent out remain in the trading portfolio or in the financial investments portfolio as long as the risks and rewards of ownership of the shares are not transferred. Securities that are borrowed are not recognised in the balance sheet as long as the risks and rewards of ownership of the securities remain with the lender.

Fees and interest received or paid are recognised on an accrual basis and recorded under net fee and commission income.

3 Events after the balance sheet date

There have been no material events after the balance sheet date, which would require disclosure or an adjustment of the consolidated financial statement for 2016.

Segment reporting

The business activities of the LLB Group are divided into the following three business areas. These form the basis for the segment reporting.

- Retail & Corporate Banking segment encompasses the universal banking business in the home markets of Liechtenstein and Switzerland.
- Private Banking segment encompasses all the private banking activities of the LLB Group.
- Institutional Clients segment encompasses the financial intermediary and investment fund business as well as the asset management and wealth structuring activities of the LLB Group

The segments receive comprehensive support from the Corporate Center. It comprises the following functions: finance, credit and risk management, legal and compliance matters, trading and securities administration, payment services, human resources management, communication and branding, corporate development, as well as logistics and IT services.

Following the management approach of IFRS 8, operating segments are reported in accordance with the internal reporting provided to the Group Executive Management (chief operating decision maker), which is responsible for allocating resources to the reportable segments and assessing their performance. All operating segments used by the LLB Group meet the definition of a reportable segment under IFRS 8.

In accordance with the principle of responsibility and based on the organisational structure, income and expenditure are allocated to the business divisions. Indirect costs, resulting from services provided internally, are accounted for according to the principle of causation and are recorded as a revenue increase for the service provider and as a cost increase for the service beneficiary. The remaining income and expenditure for overriding services which cannot be assigned to the segments are shown under Corporate Center. Furthermore, consolidation adjustments are reported under Corporate Center.

Transactions between the segments are executed at standard market conditions.

* There were no substantial earnings generated between the segments so that income between the segments is not material.

There were no revenues deriving from transactions with a single external customer that amounted to ten percent or more of the Group's revenues.

Segment reporting by geographic location

The geographic analysis of operating income and assets is based on the location of the company, in which the transactions and assets are recorded. The LLB Group does not manage the segments or the individual companies according to geographic distribution. The geographic analysis is prepared and disclosed in order to comply with IFRS.

Other personnel expenses	-3'743	-2'472	51.4
Total personnel expenses	-140'835	-123'782	13.8

[°] Contains the variable compensation of the management which is disclosed in detail in the compensation report as well as aggregated in note 41.

^{**} See note 40 for details.

The average headcount of LLB Group employees, adjusted to consider part-time staff, amounted to 844 in 2016 and 816 in 2015.

7 General and administrative expenses

in CHF thousands	2016	2015	+ / - %
Occupancy	-10'516	-6'985	50.5
Expenses for IT, machinery and other equipment	-18'380	-17'320	6.1
Information and communication expenses	-12'876	-12'287	4.8
Marketing and public relations	-8'048	-7'936	1.4
Consulting and audit fees	-5'496	-6'816	-19.4
Capital tax and other tax	-505	-497	1.4
Provisions for legal and litigation risks [°]	-24'399	785	
Material costs	-869	-845	2.7
Legal and representation costs	-837	-612	36.8
Litigation costs	-106	-1'883	-94.4
Supervision fees	-1'116	-924	20.7
Other general and administrative expenses	-6'711	-8'333	-19.5
Total general and administrative expenses	-89'859	-63'653	41.2

[°] See note 26 for details.

8 Depreciation and amortisation

in CHF thousands	2016	2015	+ / - %
Depreciation of property	-5'586	-6'613	-15.5
Depreciation of equipment	-6'902	-9'328	-26.0
Amortisation of intangible assets [°]	-15'060	-17'717	-15.0
Total depreciation and amortisation	-27'548	-33'657	-18.2

[°] Contains in 2015 a one-time impairment on intangible assets of CHF thousands 3'132.

9 Tax expenses

in CHF thousands	2016	2015	+ / - %
Current taxes	-11'024	-4'958	122.3
Deferred taxes*	1'470	-812	
Total tax expenses	-9'554	-5'770	65.6

* For further details, see note 25.

The actual net payments made by the LLB Group for domestic and foreign corporate profit taxes amounted to CHF 7.6 million for the full year 2016 and to CHF 8.7 million for the full year 2015.

The tax on pre-tax Group profit deviates from the theoretical amount, calculated on the basis of the weighted average Group tax rate on profit before tax, as follows:

in CHF thousands	2016	2015	+ / - %
Operating profit before tax	113'423	92'070	23.2
Assumed average income tax rate of 11.5% (2015: 11.5%)	-13'044	-10'588	23.2
Increase / (Decrease) resulting from			
Use of tax losses carried forward	0	-134	-100.0
Use of non-capitalised losses carried forward	405	228	77.6
Effect of taxes calculated at tax rates other than the assumed tax rate	1'891	2'018	-6.3
Tax charges / (savings) from previous years	953	0	
Other differences	241	2'706	-91.1
Total tax expenses	-9'554	-5'770	65.6

The assumed average tax burden is based on the average applicable tax rates for the individual companies or the individual tax jurisdictions, weighted according to the total contributions of the individual companies.

10 Earnings per share

	2016	2015	+ / - %
Net profit attributable to the shareholders of LLB (in CHF thousands)	98'181	82'728	18.7
Weighted average shares outstanding	28'836'386	28'821'798	0.1
Basic earnings per share (in CHF)	3.40	2.87	18.6

15 Derivative financial instruments

Within the scope of balance sheet management, interest rate swaps are concluded to hedge interest rate fluctuation risks. These instruments are fair value hedges. Furthermore, derivative financial instruments are employed primarily within the context of transactions for clients. Both standardised and OTC derivatives are traded for the account of clients. Swiss banks having a high credit worthiness act as counterparties. The bank does not assume a market-maker function. Derivative financial instruments are used to a limited extent in the management of the bank's own securities portfolio.

The LLB Group employs fair value hedge accounting for interest rate risks on fixed-rate instruments. For this purpose it uses interest rate swaps. In the 2016 business year, these had a nominal value of CHF 240 million (31.12.2015: CHF 145 million), as well as a positive replacement value of CHF 1.3 million (31.12.2015: CHF 0.4 million) and a negative replacement value of CHF 2.2 million (31.12.2015: CHF 0.5 million). At the same time, the loss on hedging instruments totalled CHF 0.5 million (2015: profit of CHF 0.7 million) and the profits on the hedged underlying transactions amounted to CHF 0.6 million (2015: loss of CHF 0.6 million).

Goodwill

The LLB Group carried goodwill for the following segment:

in CHF thousands	31.12.2016	31.12.2015
Retail & Corporate Banking	55'620	55'620

Goodwill impairment testing

Goodwill is tested twice a year for impairment – in the first quarter as a basis for the interim financial reporting at 30 June and in the third quarter as a basis for the annual financial reporting at 31 December. In order to determine a possible impairment, the recoverable amount of each cash generating unit which carries goodwill is compared with its balance sheet value. According to the calculations made, the recoverable amount of a cash generating unit always corresponds to the value in use. The balance sheet value or carrying value comprises equity before goodwill and intangible assets, as well as goodwill and intangible assets from the underlying purchase price allocation of this cash generating unit.

On the basis of the impairment testing carried out, management reached the conclusion that for the year ended on 31 December 2016, the total goodwill of CHF 55.6 million allocated to the cash generating unit Retail & Corporate Banking remains recoverable. No impairment needs to be recognised because the recoverable amount exceeds the balance sheet value.

Recoverable amount

For determining the value in use, which corresponds to the recoverable amount of the respective cash generating units, the LLB Group employs a discounted cash flow (DCF) valuation model. The DCF model used by the LLB Group takes into consideration the special characteristics of banking business and the financial services sector, as well as the regulatory environment. With the aid of the model, and on the basis of the financial planning approved by management, the cash value of estimated free cash flow is calculated. If regulatory capital requirements exist for the cash generating unit, these capital requirements are deducted from the estimated free cash flows for the respective period and are available to the cash generating unit for distribution. This amount then corresponds to the theoretical sum that could be paid out to the shareholders. For the assessment of the forecasted earnings, management employs approved financial plans covering a period of five years. The results of all periods after the fifth year are extrapolated from the forecasted result or the free cash flow of the fifth year together with a long-term growth rate corresponding to the long-term inflation rate in Switzerland and Liechtenstein. Under certain circumstances, the growth rates may vary for the individual cash generating units because the probable developments and conditions in the respective markets are taken into account.

Assumptions

As far as possible, the parameters on which the valuation model is based are coordinated with external market information. In this context, the value in use of a cash generating unit is most sensitive to changes in the forecasted earnings, changes to the discount rate and changes in the long-term growth rate. The discount rate is determined on the basis of the capital asset pricing model (CAPM), which contains a risk-free interest rate, a market risk premium, a small cap premium, as well as a factor for the systematic market risk, i.e. the beta factor.

The long-term growth rates outside the five-year planning period (terminal value), on which the impairment tests for the annual report per 31 December 2016 were based and which were used for extrapolation purposes, as well as the discount rates for the individual cash generating units, were unchanged from the parameters used at 31 December 2015. The parameters used are shown in the table below. The discount rate is directly influenced by the fluctuation of interest rates. On account of the unchanged, historically low interest rate levels on the market, the discount rate of the cash generating units has not changed in comparison with the previous year. In a longer-term comparison, the present interest rate environment is also reflected in substantially lower interest income as well as corresponding lower annual earnings and free cash flows distributable to shareholders. On account of the fact that the discount rate is linked to current interest rate levels, when the latter rise, basically the discount rate, and interest income, will also rise. The cash generating units are exposed to only a limited level of risk because they operate in a local market, and only in retail and private banking with a limited risk profile.

Sensitivities

During the periodic preparation and execution of impairment tests, all the parameters and assumptions, on which the testing of the individual cash generating units is based, are reviewed and – if necessary – adjusted. A change in the risk-free interest rate has an influence on the discount rate, whereby a change in the economic situation, especially in the financial services industry, also has an impact on the expected or estimated results. In order to check these effects on the value in use of the individual cash generating units, the parameters and assumptions employed with the valuation model are subjected to a sensitivity analysis. For this purpose, the forecasted free cash flow attributable to shareholders is changed by 10 percent, the discount rate by 10 percent and the long-term growth rates by 10 percent. According to the results of the impairment tests carried out, and based on the described assumptions, an amount of CHF 40.0 million in

in percent	Growth rates		Discount rates	
	2016	2015	2016	2015
Retail & Corporate Banking	1.0	1.0	6.0	6.0

excess of the balance sheet value is obtained for the Retail & Corporate Banking segment. A reduction of the free cash flow of 10 percent would lead to an impairment of CHF 9.5 million in the goodwill of the Retail & Corporate Banking segment and an increase in the discount rate by 10 percent would lead to an impairment of CHF 18.5 million. A reduction in the long-term growth rate of 10 percent would not lead to any impairment. The discount rate could be increased by 6.5 percent and the free cash flow could be reduced by 8.0 percent before the recoverable amount would correspond to the book value.

In view of the challenging situation in the financial services industry, which is expected to persist in the future, the management estimates that an impairment of the goodwill in the Retail & Corporate Banking segment in the coming business years is not improbable. However, thanks to the relative strength in comparison with competitors as well as the realised and planned cost-cutting and efficiency improvement measures, a positive development of the segment is expected over the medium to long-term.

If the estimated earnings and other assumptions in future business years deviate from the current outlook due to political or global risks in the banking industry – such as for example due to uncertainty in connection with the implementation of regulatory provisions and the introduction of certain legislation, or a decline in general economic performance – this could result in an impairment of the goodwill in the future. This would lead to a reduction in the income statement of the LLB Group and a decrease in the equity attributable to shareholders and net profit. Such an impairment would not, however, have an impact on cash flows or on the Tier 1 ratio because – in accordance with Liechtenstein equity capital ordinance – goodwill must be deducted from capital.

Other intangible assets

Customer relationships and brand values are reported as assets under other intangible assets. These are amortised over a period of 15 years on a straight-line basis. Estimated aggregated amortisation on intangible assets amounts to:

At 31 December 2016, there existed temporary differences of CHF thousands 3'406 which were not booked as deferred taxes and which in future could be offset with potential tax allowances (previous year: CHF thousands 4'202).

The tax losses which were not recognised as deferred tax assets per 31 December 2016 expire as follows:

in CHF thousands	31.12.2016	31.12.2015	+ / - %
Within 1 year	0	0	
Within 2 to 5 years	0	0	
Within 6 to 7 years	0	0	
No expiry	3'406	4'202	-18.9
Total	3'406	4'202	-18.9

In general, tax losses in Switzerland can be carried forward for seven years; in the Principality of Liechtenstein and Austria, they can be carried forward for an unlimited period.

The provisions for restructuring relate to the StepUp2020 strategy announced in October 2015. As per 31 December 2016, provisions amounting to CHF 0.8 million for restructuring, covering estimated rebuilding and restoration costs and expenses for social plans were allocated. No further significant provisions or restructuring costs are to be expected in connection with the announced strategies.

The LLB Group is involved in various legal proceedings within the scope of normal banking business. It allocates provisions for ongoing and threatened legal proceedings if, in the opinion of LLB, payments or losses are likely and the amounts can be estimated.

As per 31 December 2016, the LLB Group was involved in various litigation and proceedings, which could have an impact on its financial reporting. The LLB Group endeavours to disclose the claims for damages, the scope of legal proceedings and other relevant information in order for the reader to be able to estimate the possible risk for the LLB Group.

LLB Verwaltung (Switzerland) AG, formerly Liechtensteinische Landesbank (Switzerland) Ltd., is among the category 1 banks which must achieve an individual solution with the US authorities to resolve the US taxation dispute. LLB Verwaltung (Switzerland) AG, formerly Liechtensteinische Landesbank (Switzerland) Ltd., with its registered office in Zurich-Erlenbach, is responsible for the proceedings. LLB (Switzerland) Ltd. ceased its banking operations at the end of 2013 and since October 2014 is no longer subject to supervision by the Swiss Federal Financial Market Authority (FINMA). LLB Verwaltung (Switzerland) AG is cooperating closely with the US authorities and is working with them to achieve a final settlement of the issue, while complying with the prevailing legal regulations. As per 31 December 2012, in cooperation with our lawyers, on the basis of talks with the US authorities, and taking into consideration differing probabilities, various scenarios were discussed in relation to a possible outflow of resources. On the basis of these discussions, the management reached the conclusion that it is not unlikely that an outflow of resources will occur. Therefore, based on the simulated scenarios and a legal analysis as per 31 December 2012, a provision was set aside for a possible outflow of resources in connection with the investigation being carried out by the US authorities and the resulting possible payment or settlement to the latter. In the opinion of the management, the legal risk of an outflow of resources in connection with the possibility that LLB Verwaltung (Switzerland) AG may not have complied with US law, especially US tax law, was still not unlikely as per 31 December 2016. Based on the calculation criteria applied in the non-prosecution agreement between LLB AG, Vaduz, and the US authorities, as well as the latest information and payments made by other banks, a provision was recorded in the balance sheet by LLB Verwaltung (Switzerland) AG as per 31 December 2016. The management believes the provision set aside per 31 December 2016 is sufficient.

At the start of 2015, LLB Verwaltung (Switzerland) AG, formerly Liechtensteinische Landesbank (Switzerland) Ltd., received two legal claims in connection with an investment project. Several persons, who have no connection with LLB Verwaltung (Switzerland) AG, had endeavoured to persuade an investor to invest a sum in an investment project. The investment project did not exist and the persons acting fraudulently were able to embezzle a part of the investment sum. The claimants have lodged claims against LLB Verwaltung (Switzerland) AG for the payment of damages in respect of a part of the embezzled amount plus interest. LLB Verwaltung (Switzerland) AG denies that the actions of a former employee of LLB Verwaltung (Switzerland) AG led to the loss. Based on the facts of the case and the opinion of the attorneys, the management of LLB Verwaltung (Switzerland) AG currently believes that it can successfully defend itself against both claims. LLB Verwaltung (Switzerland) AG has received an undertaking from the insurance company with respect to the costs incurred.

The German tax authorities are currently investigating a large number of banks in various countries with respect to the suspicion of aiding and abetting tax evasion. The Liechtensteinische Landesbank AG is also subject to these investigations. With a view to clearing up the adverse legacy of previous years, the Liechtensteinische Landesbank AG intends to reach an amicable solution. As is the case with other banks, the Liechtensteinische Landesbank AG is currently holding discussions with the German authorities to establish clarity and legal certainty. Taking into consideration the current level of knowledge, the Liechtensteinische Landesbank AG set aside a corresponding provision as per 31 December 2016. Management considers the amount of the allocated provision to be sufficient.

The LLB Group had no contingent liabilities, either per 31 December 2016 or per 31 December 2015.

34 Fair value measurement

Measurement guidelines

The fair value represents a market-based measurement and not an entity-specific valuation. It is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date on the principal market or the most advantageous market.

As far as possible, the fair value is determined on the basis of the quoted market prices in active markets accessible to the company on the measurement date. An active, accessible market is one in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis. The fair value is determined using significant and observable inputs. These are basically available in the case of quoted assets or liabilities. If a market for financial or non-financial assets or liabilities is inactive, or if no observable inputs, or insufficient observable inputs, are available, the LLB Group must employ techniques or processes (valuation methods or models) to determine the fair value. The valuation techniques contain assumptions, including estimates, to enable an exit price on the measurement date from the perspective of the market participant to be determined. However, such assumptions and estimates contain uncertainties, which at a later date can lead to substantial changes in the fair value of financial and non-financial assets and liabilities. In the case of financial and non-financial assets and liabilities, for which a valuation technique involving non-observable market data is used to determine the fair value, these are measured at the transaction price. This fair value can differ from the fair value determined on the basis of valuation techniques.

All financial and non-financial assets and liabilities measured at fair value are categorised into one of the following three fair value hierarchies:

Level 1

The fair value of listed securities and derivatives contained in the trading portfolio and financial investments is determined on the basis of market price quotes on an active market.

Level 2

If no market price quotes are available, the fair value is determined by means of valuation methods or models, which are based on assumptions made on the basis of observable market prices and other market quotes.

Level 3

For the remaining financial instruments neither market price quotes nor valuation methods or models based on market prices are available. Our own valuation methods or models are employed to measure the fair value of these instruments.

Valuation methods

Valuation methods and techniques are employed to determine the fair value of financial and non-financial assets and liabilities for which no observable market prices on an active market are available. These include, in particular, illiquid financial investments. If available, the LLB Group uses market-based assumptions and inputs as the basis for valuation techniques. If such information is not available, assumptions and inputs from comparable assets and liabilities are employed. In the case of complex and very illiquid financial and non-financial assets and liabilities, the fair value is determined using a combination of observable transaction prices and market information.

The LLB Group employs standardised and accepted valuation techniques to determine the fair value of financial and non-financial assets and liabilities which are not actively traded or listed. In general, the LLB Group uses the following valuation methods and techniques as well as the following inputs.

	Valuation model	Inputs	Significant, non-observable inputs
Level 2			
Own investment funds	Market to model	Market prices of underlying assets	
Derivative financial instruments	Option model	Underlying assets of future contracts	
Level 3			
Financial investments at fair value through profit and loss	Market to model	Audited financial statements	Illiquidity, special micro-economic conditions
Investment property	External expert opinions, relative values in market comparison	Prices of comparable properties	Assessment of special property factors, expected expenses and earnings for the property.

Measurement of fair values by active markets or valuation techniques

The following table shows the classification of fair value hierarchies of financial and non-financial assets and liabilities of the LLB Group. All assets and liabilities are measured at fair value on a recurring basis in the statement of financial position. As per 31 December 2016, the LLB Group had no assets or liabilities which were measured at fair value on a non-recurring basis in the balance sheet. In the 2016 business year there were no significant transfers between Level 1 and Level 2 financial instruments.

Measurement of assets and liabilities, classified as Level 3

For the recurring measurement of the fair value of financial investments for which significant, non-observable inputs have been used and which are classified as Level 3, the effects on the income statement in the 2016 business year amounted to CHF 12.2 million. On account of the new assessment of the fair value of financial investments in 2016, there was a reallocation to Level 3. Both at 31 December 2015 and at 31 December 2016, the holdings of financial investments at the LLB Group were unchanged. For the recurring measurement of the fair value of investment property, for which significant, non-observable inputs have been used and which are classified as Level 3, the effects on the income statement in the 2016 business year are immaterial and therefore they are not shown. The measurement or valuation also had no influence on other comprehensive income in 2016.

The measurement process to determine the fair value of recurring and non-recurring Level 3 assets and liabilities, especially the significant non-observable inputs, as shown in the previous table, are

explained in the following. The interrelationships between observable and non-observable inputs are not explained in the following, because such interrelationships have no significant influence on the measurement on fair value.

Financial investments at fair value through profit and loss

Financial investments are periodically valued through profit and loss on the basis of market values provided by external experts. The financial investments consist of the non-listed shares of companies, which are periodically revalued on the basis of current company data or by third parties with the aid of valuation models. The valuation is made available to shareholders. An own valuation by shareholders with the aid of a valuation model based on observable or significant non-observable inputs is therefore unnecessary. How changes would affect the fair value, or how sensitively this would react, cannot be quantified or would have to be based on various assumptions to be made by LLB on how the company will develop. Since these are investments having an infrastructure character, whereby basically the fair value

has changed in the last few years only by the amount of profit attained, a sensitivity analysis would bring no additional benefit for the reader of the financial statement. The financial investments do not diverge to highest or best use.

Investment property

Investment property is periodically valued by external experts or is valued on the basis of relative values in a market comparison. If no corresponding values for comparable properties are available, on which to base a reliable calculation of the fair value, assumptions are made. These assumptions contain assessments and considerations of such circumstances as the location and condition of the property, as well as the expected costs and revenues with it. Properties are always revalued whenever on the basis of events or changed circumstances the fair value no longer reflects the market price, so that changes in the calculation of the fair value can be promptly determined and recognised in the accounts. Changes in the inputs, on which the measurement of the fair value is based, can lead to significant changes in it. It cannot be quantified to what extent changes influence the fair value and the sensitivity of fair value, because the valuation of a property is based on an individual measurement, which is influenced by various assumptions. Consequently, a significant change in the fair value can occur, which is not quantifiable. Investment properties do not diverge to highest and best use.

35 Non-current assets held for sale

Properties, which are fully owned by a Group company, are to be sold. The transfers of ownership will take place in the first quarter of 2017. One property consists of a single-family home, another property contains rental apartments and a business branch. The business branch will continue to be used on a leased agreement basis. It is assumed that the sale of the properties, which had a carrying value of CHF 0.8 million per 31 December 2016, will achieve a profit of around CHF 0.1 million.

Pension plans and other long-term benefits

40 Pension plans

Post-employment benefits

The LLB Group has established a number of pension plans in compliance with prevailing legal provisions, which insure most employees in the event of death, invalidity and retirement. In addition, further plans exist for long-service anniversaries, which qualify as other long-term employee benefits. In the case of the pension plans, contributions are made by employees, which are then supplemented by corresponding contributions from the LLB Group. The pension schemes are financed in compliance with the local legal and fiscal regulations. The risk benefits are based on the insured salary and the pension benefits on the accumulated capital. The assets of the funded pension plans are held within separate foundations or insurances and may not revert to the employer. The mortality rates specified in the Professional Pensions Law 2015 (BVG 2015) were employed to calculate the mortality, life expectancy and invalidity rates for all pension plans. The last actuarial valuations were performed on 31 December 2016 and 31 December 2015. The actuarial gains and losses are included in other comprehensive income. Joint committees are set up for pension plans, which are administered via collective foundations.

The foundation board of the autonomous pension foundation is also composed of an equal number of employee and employer representatives. On the basis of the legal provisions and the pension plan regulations, the foundation board is obligated to act solely in the interest of the foundation and the actively insured persons and pensioners. Consequently, in this pension plan the employer itself may not decide on benefits and their financing, rather decisions must be taken on equal terms.

The foundation board is responsible for determining the investment strategy, for amendments to the pension plan regulations, and especially for the financing of the pension plan benefits. The foundation board members of the pension plans specify investment guidelines for the investment of the pension plan assets, which contain the tactical asset allocation and the benchmarks for the comparison of performance with a general investment universe. The assets of the pension plans are well diversified. With regard to diversification and security, the legal provisions of the BPVG Pension Law apply to pension plans in Liechtenstein, and the legal provisions of the BVG Pension Law apply to pension plans in Switzerland. The foundation board members continually monitor whether the selected investment strategy is suitable for the provision of the pension plan benefits and whether the risk budget corresponds to the demographic structure. The observance of the investment guidelines and the investment performance of the investment advisers are reviewed on a quarterly basis. In addition, the investment strategy and its suitability and effectiveness are periodically checked by an external consultant.

The pension plan is designed as a defined contribution plan, i.e. a savings account is maintained for all the retirement benefits of each employee. The annual savings contributions and interest (no negative interest is possible) are credited to the pension savings account annually. At the time of retirement, the insured person may choose between a life-long pension, which includes a reversional spouse pension, or the withdrawal of the savings capital. In addition to the retirement benefits, the pension plan also includes invalidity and partner pensions. These are calculated on the basis of the insured annual salary (defined benefit plan). Furthermore, the insured employee may purchase improvements to his pension plan up to a maximum sum specified in the regulations. If the employee leaves the company, the savings credit balance is transferred to the new employer's pension plan or to a blocked pension savings account. When determining the benefits, the minimum provisions of the Professional Pension Plans Law (BPVG) and its implementing ordinance are to be observed. The minimum salary to be insured and the minimum pension savings balance sum are stipulated in the BPVG. On account of the pension plan structure and the legal provisions of the BPVG, the employer is subject to actuarial risks. The most important of these are investment risk, interest rate risk and longevity risk. The risks of death and invalidity have been congruently re-insured since. Currently, the individually accumulated pension capital is converted into a life-long pension at age 64 with a pension conversion rate of 5.60 percent. This conversion rate is reduced annually and will amount to 5.10 percent from 1 January 2022. Amendments to the contribution payments made by the bank, the associate companies, or the employees – in accordance with the regulations – require the approval of the bank, the associate companies and a majority of all employees. The employer must bear at least half of the contributions. In the event of underfunding, financial recovery contributions may be charged to both the employer and the employee to eliminate the shortfall in coverage.

One-time effects influencing pension plans and other long-term benefits

The Pension Fund Foundation of LLB AG reduced the conversion rate for the calculation of the life-long pension. In the 2016 business year this led to a one-time reduction in the benefit expenses for defined benefit plans of CHF 10.2 million.

The following amounts were recognised in the income statement and equity as pension costs:

Benefit expenses

At 31 December 2016, the maturities of the fixed mortgages for the members of the Board of Directors and related parties ranged between 13 and 107 months (previous year: between 11 and 119 months) at standard market client interest rates of 0.95 to 1.65 percent p.a. (previous year: 1.10 to 1.60 %). At 31 December 2016, the maturities of the fixed mortgages for the members of the Board of Management ranged between 22 and 102 months (previous year: between 1 and 114 months) at interest rates of 0.4 to 1.88 percent p.a. (previous year: 1.05 to 2.88 %).

Of the total amount for mortgages for the members of the Board of Management, CHF thousands 1'000 (previous year: CHF thousands 750) was granted at the preferential interest rate for staff, the remainder was subject to the standard market client interest rate. In the previous year, no new loans were granted.

The fair value of cover of new loans granted amounted to CHF thousands 1'577 (previous year: CHF thousands 1'577).

No allowances for loans to management were necessary. LLB granted third parties guarantees amounting to CHF thousands 168 (previous year: CHF thousands 0) for management and related parties.

* On 31 December 2016, the LLB Group held 74.2 percent of the share capital and votes of Bank Linth LLB AG. Bank Linth LLB AG held 4'985 of its own shares on 31 December 2016. This increased the LLB Group's participation in Bank Linth LLB AG and deviated from the legal group participation by the said number of own shares.

In the year under report there were no disposals or losses of control of ownership interests. As per 31 December 2016 and per 31 December 2015, there were no major restrictions in respect of the possibility to access assets of the Group companies or to appropriate them. As per 31 December 2016 and per 31 December 2015, there were no participations in consolidated structured companies.

Risk management

Principles of risk management

One of the core competences of a financial institute is to consciously accept risks and manage them profitably. In its risk policy, the LLB Group defines qualitative and quantitative standards of risk responsibility, risk management and risk control. Furthermore, the organisational and methodical parameters for the identification, measurement, control and monitoring of risks are specified. The proactive management of risk is an integral part of corporate policy and safeguards the LLB Group's ability to bear and accept risk.

Organisation and responsibilities

Group Board of Directors

The Board of Directors of the LLB Group is responsible for stipulating risk management principles, as well as for specifying responsibilities and procedures for approving business transactions entailing risk. In fulfilling its tasks and duties, the Group Board of Directors is supported by the Group Risk Committee.

Group Executive Board

The Group Executive Board is responsible for the overall management of risk readiness within the parameters defined by the Group Board of Directors and for the implementation of the risk management processes. It is supported in this task by Risk Committee.

Group Credit & Risk Management

The Group Credit & Risk Management Department identifies, assesses, monitors and reports on the principal risk exposure of the LLB Group and is functionally and organisationally independent of the operative units. It supports the Group Executive Board in the overall management of risk exposure.

Risk categories

The LLB Group is exposed to various types of risks. It differentiates between the following risk categories:

Market risk

The risk of losses arises from unfavourable changes in interest rates, exchange rates, securities prices and other relevant market parameters.

Liquidity and refinancing risk

Represents the risk of not being able to fulfil payment obligations on time or not being able to obtain refinancing funds on the market at a reasonable price to fulfil current or future payment liabilities.

Credit risk

Credit or counterparty risk includes the danger that a client or a counterparty cannot or cannot completely fulfil their obligations vis à vis the LLB Group or an individual group company. This can result in a financial loss for the LLB Group.

Operational risk

Is the danger of losses due to the unsuitability or failure of internal procedures, people or systems, or as a result of external events.

Strategic risk

Arises as a result of decisions taken by the Group Executive Board, which have a negative influence on the survival, development ability or independence of the LLB Group.

Reputation risk

If risks are not recognised, reasonably controlled and monitored, this can lead not only to substantial financial losses, but also to damage to the group's reputation.

Risk categories

Risk management process

Risk management process

The implementation of an efficient risk management process is essential to enable risks to be identified, assessed, controlled and monitored, and should create a culture of risk awareness at all levels of the LLB Group. The Group Board of Directors specifies the risk strategy, which provides the operative units with a framework for the treatment of risk exposure. Depending on the type of risk, not only the stipulation of upper limits for losses may be required, but also a detailed set of regulations which stipulate which risks may be accepted under what conditions, and when measures to control risks are to be implemented.

The diagram risk management process shows the control loop of the LLB Group's risk management process.

1 Market risks

Market risk is the risk that arises from changes in interest rates, exchange rates and security prices in the financial and capital markets. A differentiation is made between market risks in the trading book and market risks in the banking book. The potential for losses exists primarily in the impairment of the value of an asset or the increase in the value of liabilities (market value perspective) as well as in secondary capacity in the diminution of current earnings or an increase in current expenditures (earnings perspective).

1.1 Market risk management

The LLB Group has in place a differentiated risk management and risk control system for market risks. The market risk control process comprises a sophisticated framework of rules involving the identification and the uniform valuation of market risk-relevant data as well as the control, monitoring and reporting of market risks.

Trading book

The trading book contains own positions in financial instruments which are held for short-term further sale or repurchase. These activities are closely associated with the needs of our clients for capital market products and are regarded as being supporting activities for our core business.

The LLB Group conducts relatively small scale trading book activities in accordance with Article 94 (1) CRR. A limits system is in operation to ensure compliance and is monitored by Group Risk Management. On account of the materiality, the trading book is no longer explained in detail.

Banking book

In general, the holdings in the banking book are employed to pursue long-term investment goals. These holdings include assets, liabilities, and off-balance sheet positions, which are the result, on the one hand, of classical banking business and, on the other, are held to earn revenue over their life.

Market risks with the banking book mainly involve interest rate fluctuation risk, exchange rate risk and equity price risk.

Interest rate fluctuation risk

This is regarded as the adverse effects of changes in market interest rates on capital resources or current earnings. The different interest maturity periods of claims and liabilities from balance sheet transactions and derivatives represent the most important basis.

Exchange rate risk

This relates to the risks arising in connection with the uncertainties regarding future exchange rate trends. The calculation of these risks takes into consideration all the positions entered into by the bank.

Equity price risk

This is understood to be the risk of losses due to adverse changes in the market prices of equities.

1.2 Valuation of market risks

Sensitivity analysis

In sensitivity analysis a risk factor is altered. Subsequently, the effects of the alteration of the risk factor on the portfolio concerned are estimated.

Value-at-risk

The value-at-risk concept measures the potential loss under normal market conditions over a given time interval.

Scenario analysis

While the value-at-risk concept supplies an indication of possible losses under normal market conditions, it cannot provide information about potential losses under extreme conditions. The aim of the scenario analyses of the LLB Group is to simulate the effects of normal and stress scenarios.

1.3 Distribution of market risks

Within the specified limit parameters, the individual group companies are at liberty to manage their interest rate risks as they wish. Interest rate swaps are employed mainly to control interest rate risks. Risks are restricted by means of value-at-risk models and sensitivity limits. In client business, currency risks are basically controlled by making investments or obtaining refinancing in matching currencies. The residual currency risk is restricted by means of sensitivity limits. Investments in equities are limited by the imposition of nominal limits.

1.4 Monitoring and reporting of market risks

Group Credit & Risk Management monitors the observance of market risk limits and is also responsible for reporting market risks.

1.5 Value-at-risk and sensitivities by risk categories

Value-at-risk

The value-at-risk is an estimate of the potential loss under normal market conditions and is calculated at the LLB Group on the basis of a confidence level of 99 percent and a holding period of twelve weeks.

Calculation is made based on historical value-at-risk.

Sensitivities

Interest rate sensitivity measures the market change on interest-rate-sensitive instruments for the LLB Group caused by a linear interest rate adjustment of + / - 100 basis points.

In contrast, currency sensitivity affects both interest rate sensitive and non-interest rate sensitive instruments. The sensitivity of instruments in foreign currencies is determined by multiplying the CHF market value by the assumed exchange rate fluctuation of + / - 10 percent.

The equity price risks are measured assuming a price fluctuation of + / - 10 percent on the equity market.

Effects on group net profit and equity

Exchange rate risk

The price gains resulting from the valuation of transactions and balances are booked to profit and loss. The price gains resulting from the transfer of the functional currency into the reporting currency are booked under other comprehensive income without affecting profit and loss.

Interest fluctuation risk

Within the scope of financial risk management, interest fluctuation risk in the balance sheet business of the LLB Group is primarily secured by means of interest rate swaps. The LLB Group recognises client loans in the balance sheet at amortised cost. This means that a change in the interest rate does not cause any change in the recognised amount and therefore to no significant recognition affecting profit and loss of the effects of interest rate fluctuation. To offset the value adjustments of interest rate hedging transactions, which are to be booked to profit and loss, the LLB Group introduced fair value hedge accounting at portfolio level for interest fluctuation risks from 1 October 2015 (see page 122, point 2.8, Derivative financial instruments and hedge accounting).

At 31.12.2016, mortgage loans stood at CHF 9'986 million. The exchange rate risks applying to this portfolio are hedged at 13.6 percent through interest rate swaps

Equity price risk

The valuation is carried out at current market prices. The equity price risk resulting from the valuation at current market prices is reflected in the income statement and in other comprehensive income.

In the interest rate repricing balance sheet excess assets, equity and liability are calculated using fixed-interest rate and derivative positions in the balance sheet and broken down interest commitments of financial assets and liabilities (nominal) into cycle times. The positions within an unspecified duration of interest rate repricing are allocated to the corresponding cycle times on the basis of a replication.

2 Liquidity risk

Liquidity risk is defined as a situation where present and future payment obligations cannot be fully met or met on time, or in the event of a liquidity crisis, refinancing funds may only be available at increased market rates (refinancing costs), or they can only be made liquid at markdowns to market rates (market liquidity risk).

2.1 Liquidity risk management

Processes and organisational structures ensure that liquidity risks are identified, uniformly measured, controlled and monitored, as well as being included in risk reporting. The liquidity risk regulations, which include the LLB Group's risk tolerance criteria, are regularly reviewed by the Group Executive Board and approved by the Group Board of Directors. The liquidity risk limits to be observed by the LLB Group are stipulated in the regulations.

The objectives of the LLB Group's liquidity risk management include the following points:

- the ability to meet financial obligations at all times
- compliance with regulatory provisions
- optimisation of the refinancing structure
- optimisation of payment streams within the LLB Group

2.2 Valuation of liquidity risks

In our liquidity risk management concept, scenario analysis plays a central role. This includes the valuation of the liquidity of assets, i.e. the liquidity characteristics of our asset holdings in various stress scenarios.

2.3 Contingency planning

The LLB Group's liquidity risk management encompasses a contingency plan. The contingency plan includes an overview of emergency measures, sources of alternative financing and governance in stress situations.

2.4 Monitoring and reporting of liquidity risks

Group Credit & Risk Management monitors compliance with liquidity risk limits and is responsible for reporting on liquidity risks.

2.5 Liquidity coverage ratio (LCR)

The delegated regulation (EU) 2015 / 61, which came into force in Liechtenstein in January 2016, supplements the Capital Requirements Regulation (CRR) in regard to liquidity coverage criteria for banks. The regulations are to ensure that banks possess a reasonable level of liquidity in order to cover their liquidity requirements in the case of a liquidity stress scenario within 30 calendar days. As the only binding regulatory liquidity reference figure, the LCR represents an important indicator both for liquidity risk measurement as well as liquidity risk control.

At the end of 2016, a regulatory LCR lower limit of 70 percent was applicable for the LLB Group. With a value of 115 percent, the LLB Group's ratio was substantially higher than legally required.

The following table shows the maturities according to contractual periods.

3 Credit risk

Within the scope of credit risk management, vital importance is attached to the avoidance of credit risks and the early identification of default risks. In addition to systematic risk / return management at the individual loan level, the LLB Group proactively manages its credit risks at the credit portfolio level. The primary objective is to reduce the overall level of risk through diversification and a stabilisation of expected returns.

3.1 Credit risk management

Processes and organisational structures ensure that credit risks are identified, uniformly evaluated, controlled, monitored and included in risk reporting.

Basically, the LLB Group conducts its lending business for private and corporate clients on a secured basis. The process of granting a loan is based on a thorough evaluation of the borrower's creditworthiness, the possible impairment and the legal existence of collateral, as well as risk classification in a rating process performed by experienced credit specialists. The granting of loans is subject to a specified assignment of authority. A major characteristic of the credit approval process is the separation between front and back office functions.

In addition, the LLB Group conducts lending business with banks on a secured and unsecured basis, whereby individual risk limits are approved for every counterparty.

Rating classes (master scale)

LLB rating	Description	External rating (Moody's) ^{oo}
1 to 4	Investment grade	AAA, Aa1, Aa2, Aa3, A1, A2, A3, Baa1, Baa2, Baa3
5 to 8, not rated ^o	Standard monitoring	Ba1, Ba2, Ba3, B1, B2
9 to 10	Special monitoring	B3, Caa, Ca, C
11 to 14	Sub-standard	Default

^o Non-rated loans are covered and subject to limits.

^{oo} For the securitisation of credit risks in the standard approach, the LLB Group employs solely the external ratings of a recognised rating agency (for the segments: due from banks, finance companies and securities firms, due from companies and due from international organisations).

Expected loss

Expected loss is a future-related, statistical concept that permits the LLB Group to estimate the average annual costs that could be incurred if positions in the current portfolio are classified as at risk. It is calculated on the basis of the default probability of a counterparty, the expected credit commitment made to this counterparty at the time of the default, and the magnitude of the loss given default.

3.2 Evaluation of credit risks

The consistent evaluation of credit risks represents an essential prerequisite of successful risk management. The credit risk can be broken down into the components: probability of default, loss given default and the exposure at the time point of the default.

Probability of default

The LLB Group assesses the probability of default of individual counterparties by means of an internal rating system. The different rating procedures are adapted to suit the different characteristics of borrowers. The credit risk management ratings employed for banks and debt instruments are based on external ratings from recognised rating agencies.

The reconciliation of the internal rating with the external rating is carried out in accordance with the following master scale.

Loss given default

The loss given default is influenced by the amount of collateralisation and the costs of realising the collateral. It is expressed as a percentage of the individual commitment.

The potential loss at portfolio level is broken down as follows at the LLB Group.

Value-at-risk concept

The value-at-risk approach aims at computing the size of fluctuations in credit losses incurred by means of a statistical model and to show the change in the risk status of the credit portfolio.

Scenario analysis

The modelling of external credit losses is performed on the basis of stress scenarios, which enable us to evaluate the effects of fluctuations in the default rates of the assets pledged as collateral taking into consideration the existing risk concentration in every portfolio.

3.3 Controlling credit risk

Credit risk management has the task of actively influencing the risk situation of the LLB Group. This is carried out using a limits system, risk-adjusted pricing, through the possibility of using risk hedging instruments and the specific repayment of credit commitments. Risk management is conducted both at the individual loan and at the portfolio level.

Risk restriction

The LLB Group has in place a comprehensive limits system to restrict credit risk exposure. In addition to the limitation of individual credit risks, to prevent risk concentrations, the LLB Group assigns limits for countries, segments and sectors.

Risk mitigation

To mitigate credit risk exposure, the LLB Group takes security mainly in the form of pledged assets and financial collateral. In the case of financial collateral in the form of marketable securities, we determine their collateral value by applying a schedule of reductions, the size of which is based on the quality, liquidity, volatility, and complexity of the separate instruments.

Derivatives

The LLB Group may employ credit derivatives to reduce risks. This possibility has not been utilised in recent years.

3.4 Monitoring and reporting of credit risks

The organisational structure of the LLB Group ensures that departments which cause the risks and those that evaluate, manage and monitor them are completely separated.

Individual credit risks are monitored by means of a comprehensive limits system. Infringements are immediately reported to the senior officer responsible.

3.5 Risk provisioning

Overdue claims

A claim is deemed to be overdue if a substantial liability from a borrower to the bank is outstanding. The overdraft begins on the date when a borrower exceeds an approved limit, has not paid interest or amortisation, or has utilised an unauthorised credit facility.

Specific valuation allowances are made for claims that are overdue by more than 90 days.

Default-endangered claims

Claims are regarded as being in danger of default if, on the basis of the client's creditworthiness, a loan default can no longer be excluded in the near future.

Specific value allowances

Each impaired claim is individually assessed and the restructuring strategy as well as the estimate of future recoverable amounts are determined. An individual value allowance is allocated on the basis of these criteria.

3.6 Country risks

A country risk arises if specific political or economic conditions in a country affect the value of a foreign position. Country risk is composed of transfer risk (e.g. restrictions on the free movement of money and capital) and other country risks (e.g. country-related liquidity, market and correlation risks).

Country risks are controlled on the basis of a limits system and are continually monitored. Ratings provided by a recognised rating agency are utilised for certain individual countries.

The largest credit risk for the LLB Group arises from loans made to banks and loans made to customers. In the case of loans to customers, the majority of loans are secured by mortgages, which are granted to clients having first-class creditworthiness within the scope of the LLB Group's lending policy. Thanks to the diversified nature of the collateral portfolio, containing properties in the Principality of

Liechtenstein and in Switzerland, the risk of losses is reduced to a minimum. The LLB Group undertakes bank investments on both a secured and an unsecured basis. The risk of losses with loans to banks is restricted, on the one hand, through a broad distribution of risks and, on the other, by the strict minimum lending requirements applied to the counterparties.

4 Operational risk

The LLB Group defines operational risks as being the danger of losses due to the failure of internal procedures, people or IT systems or as a result of an external event. Legal risks form a part of operational risks. The LLB Group has in place an active and systematic process for managing operational risks. Policies and directives have been formulated for the identification, control and management of this risk category, which are valid for all Group companies. Potential and incurred losses from all organisational units, as well as significant external events, are recorded and evaluated promptly at the parent bank. In addition, the LLB Group collates and analyses risk ratios, e.g. from the areas of due diligence and employee transactions for own account. Ultimately, the risks are limited by means of internal rules and regulations regarding organisation and control.

5 Strategic risk

For LLB Group, a strategic risk represents the endangering of a projected business result due to the inadequate focusing of the Group on the political, economic, technological, social or ecological environment. Accordingly, these risks can arise as a result of an inadequate strategic decision-making process, unforeseeable events on the market or a deficient implementation of the selected strategies.

Strategic risks are regularly reviewed by the Group Risk Committee and by the Group Board of Directors.

6 Reputational risk

If risks are not identified, adequately managed and monitored, this can lead not only to substantial financial losses, but also to reputational damage. LLB Group does not regard reputational risk as an independent risk category, but rather as the danger of additional losses stemming from the categories concerned. Consequently, a reputational risk can both cause losses in all risk categories, such as market or credit risks, and be caused by such losses.

Reputational risks are regularly reviewed by the Group Risk Committee and by the Group Board of Directors.

7 Fair value of financial instruments

The following table shows the fair values of financial instruments, based on the valuation methods explained in the following, and assumptions. The fair value represents a market-based measurement and not an entity-specific valuation. It is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the transaction date on the principal market or the most advantageous market. Details about the measurement of fair values are shown in note 34.

Fair value of financial instruments

in CHF thousands	31.12.2016			31.12.2015		
	Carrying value	Fair value	Deviation	Carrying value	Fair value	Deviation

Debt issued	1'228'035	1'289'599	-61'564	1'213'244	1'289'414	-76'170
Deviation between fair value and carrying value			411'911			467'964

The following valuation methods are applied in calculating the fair value of financial instruments:

Cash and balances with central banks and money market instruments

These financial instruments have a maturity or a refinancing profile of maximum one year. The book value corresponds approximately to fair value.

Due from/to banks, loans and due to customers

The fair value of these positions having a maturity or a refinancing profile is determined using similar maturity swap rates. Replicate portfolios are employed for products for which fixed-interest rates or cash flows are not known in advance.

Trading portfolio assets, derivative financial instruments and financial investments at fair value through profit and loss

For the majority of financial instruments, fair value corresponds to the market value. The fair value of financial instruments without an established market value is determined using generally accepted valuation models.

8 Netting of financial assets and financial liabilities

The table below provides an overview of the financial assets and financial liabilities which are subject to an enforceable netting agreement or similar agreements. LLB Group has concluded agreements with various counterparties which permit netting. These are mainly agreements in connection with securities lending and borrowing transactions, reverse-repurchase deals and over-the-counter transactions. LLB Group does not conduct netting with the financial assets and

financial liabilities of balance sheet transactions because the legal requirements for netting are not satisfied. Accordingly, the table below shows unnetted amounts in the balance sheet, risks therefore which the bank has accepted with the individual executed transactions, and which existed on the balance sheet date. The information provided in the table below does not represent the current credit risk in connection with the transactions conducted by LLB Group.

in CHF thousands	Subject to netting agreements		Potential netting amounts					On the balance sheet recognised amounts

9 Capital adequacy requirements (Pillar I)

The Banking Law and Banking Ordinance of the Principality of Liechtenstein form the legal basis of capital adequacy requirements, which in turn are based on the directives of the Basel Committee on Banking Supervision as adapted by the European Union.

In accordance with Basel III, the banks may choose from various approaches to calculate the capital requirements for credit, market and operational risks. The LLB Group applies the standard approach for credit risk, the basic indicator approach for operational risks, and

the standard approach for market risks (trading book activities of insignificant materiality in accordance with Article 94 (1) CRR). The determination of capital requirements and tier capital is carried out on the basis of the IFRS consolidated financial statement, whereby non-realised gains are deducted from core capital.

At the LLB Group, the scope of consolidation for determining capital requirements and for the financial accounts is identical.

9.3 Leverage Ratio (LR)

A further integral part of the Basel III package is the leverage ratio which, with its comparison of unweighted on-balance sheet and off-balance sheet risk positions, on the one hand, and equity held, on the other, attempts to prevent the danger of financial institutes becoming excessively indebted. This reference ratio stands at 3.0 percent and is currently being monitored by the supervisory authority. It is not yet legally binding. At the end of the year 2016, the leverage ratio of LLB Group amounted to 7.8 percent.

10 Internal capital (Pillar II)

The financial market regulatory requirements with respect to quantitative risk management, which arise from Pillar II, are fulfilled by LLB Group by, among other measures, the conducting of a risk-bearing capacity calculation. The objective of the risk-bearing capacity calculation is to ensure the continued existence of LLB Group. In line with this objective, the adequacy of the Group's capital resources is tested using internal models. The results attained with the individual risk types are aggregated in a total risk potential and are compared with the capital available to cover these potential losses. This process enables the extent to be determined to which LLB Group is in a position to bear potential losses.

For the purpose of the calculation of its risk-bearing capacity, LLB Group employs a value-at-risk approach with a confidence level of 99.9 percent and a holding duration of one year. Correlations between the individual risk types are not considered. To underpin operational risks, LLB Group applies the values from the basic indicator approach of Pillar I and adjusts them by adding a risk premium.

LLB Group's financial strength should remain unimpaired by fluctuations on the capital market. Scenario analyses and stress tests are employed to simulate external influences and assess their impact on equity capital. Where necessary, measures are taken to mitigate risks.

Calculation method

Assets under management comprise all client assets managed or held for investment purposes. Basically, these include all balances due to customers, fiduciary time deposits and all valued portfolio assets.

Also included are other types of client assets, which can be deducted from the principle of the investment purpose. Custody assets (assets held solely for transaction and safekeeping purposes) are not included in assets under management.

Assets in own-managed funds

This item comprises the assets of the LLB Group's own investment funds.

Assets with discretionary mandates

Securities, value rights, precious metals, the market value of fiduciary investments with third parties and customer deposits are included in the calculation of assets with discretionary mandates. The figures comprise both assets deposited with Group companies and assets deposited with third parties, for which the Group companies hold a discretionary mandate.

Other assets under management

Securities, value rights, precious metals, the market value of fiduciary investments with third parties and customer deposits are included in the calculation of other assets under management. The figures comprise assets, for which an administration or advisory mandate is exercised.

Double counting

This item comprises fund units in own-managed funds which are contained in client portfolios with discretionary mandates and in other client safekeeping accounts.

Net new money

This position is composed of the acquisition of new clients, lost client accounts and inflows or outflows from existing clients. Performance-related asset fluctuations, e.g. price gains, interest and dividend payments including interest, commissions and expenses charged to client accounts, are not regarded as inflows or outflows. Acquisition-related changes to assets will also not be considered. During the year under report, client assets amounting to net CHF 75 million were reclassified as custody assets.
